## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "solder material" as being recited in claims 1, 3 and 5 for bonding of the optical fibers to the ferrule must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Japan'104.

Japan'104 (see figure 5) discloses substantially the claimed hermetically sealed, optical fiber assembly and a method of forming a hermetically sealed, optical fiber assembly, comprising a plurality of optical fibers 24, a ferrule 19 having a first aperture extending through a first end of the ferrule and a plurality of second apertures 31 extending through a second end of the ferrule opposing the first end such that a continuous passage is formed between the first aperture and each of the second apertures, said first aperture having a diameter greater than a diameter of the second apertures and being sufficiently large in size to receive the plurality of optical fibers therein, such that the plurality of optical fibers traverses said first aperture and each of the optical fibers traverse a respective one of the second apertures; an adhesive material 27 securing each of the optical fibers to the first apertures and to said respective one of the second apertures. As to claims 2 and 4, figure 6 of Japan'104 shows that it is possible to fill the first aperture with the adhesive material.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hug et al. and Warnes et al. are further cited to show optical fiber assemblies.
